

Thanks for the opportunity to provide feedback after this evenings meeting.

How can rural and remote hospitals be supported

Metropolitan health services have existing clinical / support and training relationships with rural / regional hospitals, eg Neurology / stroke with Wangaratta, St Vincent's with Warrnambool etc. Such a relationship can be leveraged to provide support for clinical governance

A role for the clinical network

We want to enable low performing services to become high(er) performing services. Sticks make it more difficult for low performing service to improve.

Carrots to the low performer to build capacity doesn't reward success

thus fund the higher performing or exemplar service to partner the low performing unit

Regards

Michael
